Search Noises

Protein Sequence Searches – February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (uniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

Anthrax toxin protective antigen (PA) binds to the ATR at a von Willebrand factor A domain located in the extracellular domain of ATR. The invention provides ATR polypeptides and polynucleotides, vectors, host cells, and transgenic and knock-out animals. It also provides methods for identifying molecules that bind the ATR and which reduce the coxicity of anthrax toxin. A claimed method for treating anthrax in a human or animal involves administering an agent that inhibits binding between PA and ATR at a level effective to reduce the severity of anthrax. Suitable agents include ATR or a PA-binding fragment of ATR, a PA-binding polypeptide at least 80% identical to these, a fusion protein, a monoclonal or polyclonal antibody, a polysaccharide, a lipid or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1; Page 29-30;

A AAD05300-AAD05379 represent cDNAs corresponding to 28 human secreted compretent genes, and AAE01436-AAE01513 represent the proteins they encode. AAE01514-AAE01544 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing, treating cor ameliorating medical conditions, e.g., by protein or gene therapy. The protein in a sample or by determining the amount of the new genes. Specific uses are described for each of the 28 genes. The tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, autoimmune disorders, cancer, tumours, foetal and developmental abnormalities, autoimmune disorders, cancers, timestoja, inflammation, allergies, autoimmune cognitive disorders (e.g., Alzheimer's disease, Parkinson's disease), cognitive disorders, schizophrenia, asthma, skin disorders (e.g., regnancy-related disorders, gastrointestinal disorders, gregnancy-related disorders, endocrine disorders, and infections. The proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a correct commonseasy or enzyme linked immunosorbent assay (ELISA). The invention can be used in alleviating of the invention in the invention of the invention of the invention of the invention of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             foetal abnormality; developmental abnormality; haematopoietic disorder; immune system disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; AIzheimer's disease; parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; anglogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder; coll culture; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemocaxis; food additive; gene therapy; binding partner identification;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid molecules encoding 28 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and

The present invention relates to albumin fusion proteins comprising a therappeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Albumin fusion protein; therapeutic protein X; human albumin; human serum albumin; HSA; cancer; reproductive disorder; digestive disorder; immune disorder; endocrine disorder;

albumin fusion proteins,

useful for diagnosing, treating,

preventing

```
activities: Cytostatic, antianaemic, antiarthritic, antiasthmatic, anti-
CC HIV, immunosuppressive, antianaemic, antiavernic, antiasthmatic, antiacterial,
CC osteopathic, dermatological, antigut, immunomodulator, antiarrhythmic,
CC cardiant, nootropic, antilipaemic, nephrotropic, uropathic,
CC neuroprotective, antiparkinsonian, tranquilizer, antidiabetic, anabolic,
CC hypertensive, and vulnerary. The albumin fusion protein nucleic acid may
CC be used in gene therapy to treat disorders. The albumin fusion protein is
CC useful for diagnosing, treating, preventing or ameliorating diseases or
CC disorders comprising indication: V. The diseases or disorders include:
CC cancer (e.g. leukaemia, colon, bone, breast, liver or lung cancer),
CC immune or haematopoletic diseases (e.g. anaemia, Hodgkin's disease, acute
CC lymphocytic anaemia, multiple myeloma, arthritis, asthma, AIDS,
CC autolmmune disease, inflammatory bowel disease, prostatitis, inguinal
CC disease), reproductive system disorders (e.g. prostatitis, inguinal
CC hernia, varicocele, penile carcinoma, ovarian adenocarcinoma or Sertoli-
CC leydig tumours), musculoskeletaci diseases (e.g. giant cell tumours,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   fragment or variant, a nucleic acid molecule comprising a polynucleotide sequence encoding the albumin fusion protein; a vector comprising the nucleic acid molecule of the albumin fusion protein; and a host cell comprising the nucleic acid molecule of the albumin fusion protein. The albumin fusion protein and its compositions have the following
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 or ameliorating diseases or disorders e.g. cancer, anemia, arthritis, asthma, inflammatory bowel disease or Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     albumin fusion protein formula; a method of treating a disease or disorder in a patient comprising the step of administering the albumin fusion protein; a method of treating a patient with a disease or disorder that is modulated by Therapeutic protein: X, or its fragment or variant; a method of extending the shelf life of Therapeutic protein: X, or its a method of extending the shelf life of Therapeutic protein: X, or its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               scleroderma, wound healing or epidermolysis bullosa). This sequence represents a therapeutic protein X relating to the albumin fusion prof the invention. The sequence listing data for this specification of the invention the USPTO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     further relates to: a composition comprising the albumin fusion protein and a pharmaceutical carrier; a kit comprising the composition of the

                                                                                                                                                                                                                                     The invention relates to an isolated molecule comprising an antibody variable region which specifically binds to an extracellular domain of a tumour endothelial marker (TEM) protein selected from ABB90732, ABB90740, ABB90749, ABB90750 and ABB90769. The antibodies which bind to TEM proteins have cytostatic, immunostimulant and antiangiogenic activity. They are useful for inhibiting tumour provent, neoangiogenesis in subjects bearing a vascularised tumour, polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis and psoriassis. Human, mouse and rat TEM genes and the encoded proteins (ABB9075-ABL92141 and ABB90721-ABB90789) are disclosed, as are marker oligonucleotide sequences: tumour endothelial markers (TEM) ABL9296-ABL92041 and ABL92143-ABL92191; normal
                                                                                                                                                                                                        endothelial markers (TEM) endothelial markers (NEM)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  An isolated molecule comprising an antibody variable region which specifically binds to an extracellular domain of a tumor endothelial marker (TEM) protein, useful for inhibiting tumor growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  N-PSDB;

                                        The invention relates to an isolated molecule comprising an antibody variable region which specifically binds to an extracellular domain of a tumour endothelial marker (TEM) protein selected from ABB90732, ABB90740, ABB90749, ABB90759 and ABB90769. The antibodies which bind to TEM proteins have cytostatic, immunostimulant and antiangiogenic activity. They are useful for inhibiting tumour growth, neoangiogenesis in subjects bearing a vascularised tumour, polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis and psoriasis. Human, mouse and rat TEM genes and the encoded proteins (ABL92075-ABL92141 and ABB90721-ABB90789) are disclosed, as are marker oligonucleotide sequences: tumour endothelial markers (TEM) ABL92042-ABL92041 and ABL92143-ABL92191; normal endothelial markers (NEM) ABL92042-ABL92074; and pan-endothelial markers
                                                                                                                                                                                                                                                                                   An isolated molecule comprising an antibody variable region which specifically binds to an extracellular domain of a tumor endothelial marker (TEM) protein, useful for inhibiting tumor growth.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9999999999999999999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is the protein sequence of a human surface—bound anthrax toxin receptor (ATR), previously designated TEM8, and identified following a database screening using a newly isolated human surface-bound ATR (see ABBS-4903). The present sequence differs from the newly isolated comman ATR only in the cytoplasmic domain (221 rather than 25 amino acids long), suggesting differential splicing of a primary mRNA transcript. Anthrax toxin protective antigen (PA) binds to these ATRs at a von willebrand factor A domain located in the extracellular domain of ATR. The invention provides ATR polypeptides and polynucleotides, vectors, comethods for identifying molecules that bind the ATR and which reduce the toxicity of anthrax toxin. A claimed method for treating anthrax in a consider of anthrax involves administering an agent that inhibits binding between PA and ATR at a level effective to reduce the severity of anthrax. Suitable agents include the present polypeptide or a PA-binding crafid or a nucleic acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a novel method for the isolation of endothelial cells (ECs), and the identification of genes expressed in normal and tumour ECs. Tumour endothelial marker (TEM), normal endothelial marker (NEM), and pan-endothelial marker (PEM) genes are identified in human ECs. The human EC marker proteins and the polynucleotide sequences encoding them are useful for detecting, diagnosing or treating tumours as well as polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis, and psoriasis. They are all useful for inhibiting meoangiogenesis or tumour angiogenesis, for inducing an immune response to tumour endothelial cells in a patient for identifying candidate drugs for treating tumours. The present sequence represents a human TEM or NEM protein of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a novel method for the isolation of endothelial cells (BCs), and the identification of genes expressed in normal and tumour ECs. Tumour endothelial marker (TEM), normal endothelial marker (PEM) genes are identified in human ECs. The human EC marker proteins and the polynucleotide sequences encoding them are useful for detecting, diagnosing or treating tumours as well as polycystic kidney disease, diabetic retinopathy, rheumatoid arthritis, and psoriasis. They are also useful for inhibiting neoangiogenesis or tumour angiogenesis, for inducing an immune response to tumour endothelial cells in a patient, or for identifying candidate drugs for treating tumours. The present sequence represents a human TEM or NEM protein of the invention
               Human heat mitochondrial protein as

                                                                                                                                                                                                                                                                                                                                        for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying protesins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRF) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, antiarthritic, osteopathic, ophthalological and anticonvulsant, antiarthritic, osteopathic, ophthalological and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           12-APR-2002;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                          The present invention describes a method for detecting a pancreatic CC cancer-associated transcript in a biological sample. The method comprises CC contacting the biological sample with a polynucleotide that selectively hybridises to a sequence at least 80% identical to a sequence as shown in CC any one of Tables 3 to 25 in the specification or having the GenBank Accession Number AF279145. Also described: (1) diagnosing pancreatic CC cancer in a human or animal subject being tested, determining the CC likelihood that a subject having a pancreatic cancer for CC surgical resection therapy; (2) detecting a pancreatic cancer associated polypeptide in a biological sample; (3) determining the likelihood that a subject having a pancreatic cancer. A pancreatic cancer associated colypeptide in a biological sample; (3) determining the likelihood that a colypeptide in a biological sample; (3) determining the likelihood that a subject having a pancreatic cancer. A pancreatic cancer and (4) monitoring the colypeptide or a therapeutic treatment of pancreatic cancer. A pancreatic cancer associated in CC gene and protein therapy. A pancreatic cancer associated transcript CC cancer associated transcript has cytostatic cancer associated transcript CC used for diagnosing or prognosing the polymucleotide, an isolated colypeptide or an antibody that binds to the isolated polypeptide can be used for diagnosing or prognosing pancreatic cancer or for preparing a colypeptide can be used for diagnosing or prognosing pancreatic cancer or for preparing a colypeptide cancer and for the early detection of pancreatic cancer or for preparing a colypeptide cancer for following the polymosic or the prognosic or the prognosic or the prognosic or concernation or following the polymosic or the prognosic or concernation or following the polymosic or the prognosic o

The invention relates to a novel fusion polypeptide comprising a von Willebrand factor A-like domain (vWF) amino acid sequence and an amino acid sequence heterologous to the vWF. The polypeptide of the invention demonstrates antibacterial activities whilst the composition and method may be useful in preventing or ameliorating the symptoms of cutaneous and/or inhalation anthrax. The current sequence is that of the human TANGO 197 Ig mutated fusion protein of the invention.

CC The genes and their secreted proteins are useful for preventing, treating CC or ameliorating medical conditions, e.g., by protein or gene therapy.

CC Pathological conditions can be diagnosed by determining the amount of the conditions can be diagnosed by determining the amount of the conditions can be diagnosed by determining the amount of the conditions in the trisques in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative conditions in the diagnosis or treatment of proliferative conditions in the diagnosis or treatment of proliferative conditions in the diagnosis or treatment of proliferative conditions are discorders, diseases of the immune system, AIDS, autoimmune conditions are conditive discorders, diseases of the immune system, AIDS, autoimmune conditions and discorders, schizophrenia, asthma, skin discorders (e.g., conditive discorders, schizophrenia, asthma, skin discorders (e.g., conditive discorders, kidney discorders, gastrointestinal discorders, conditions also be used to aid wound healing and epithelial cell conditions. The conditions of prevent skin aging due to sunburn, to maintain organs to regenerate tissues, to identify their cognate ligands or binding conditions or supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or conditions mentioned above, and in diagnostic immunoassays e.g., radioinmunoassays or enzyme linked immunoasrbent assay (BIISA). The invention can a human secreted protein of the invention can be used in alleviating the invention of the invention can be used in alleviating the invention of the invention can be used an archerian of the invention can be used in alleviating the invention of the invention can be used in alleviating the invention of the invention can be used in alleviating the invention can be used to a condition of the invention can be used to a condition of the invention c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
                                                         The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alzheimer's, Parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis). ABG63326-ABG65518 represent albumin fusion proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Albumin fusion protein; therapeutic protein; human albumin; land serum albumin; HSA; cancer; reproductive disorder; digestive disorder; immune disorder; endocrine disorder; haematopoietic disorder; neural disorder; connective disorder;

-i-FUNCTION: Cellular role is not yet known.

-i- SUBUNIT: Binds to the protective antigen (PA) of Bacillus anthracis. Binding does not occur in the presence of calci-
-i-SUBCELLULAR LOCATION: Type I membrane protein (Probable).

-i- ALTERNATIVE PRODUCTS:

Event-Alternative splicing; Named isoforms-4;
Comment-Experimental confirmation may be lacking for son

                                                                                                                       FUNCTION: Cellular role is not yet known.
SUBUNIT: Binds to the protective antigen (PA) of Bacillus anthracis in a divalent cation-dependent manner, with the following preference: calcium > manganese > magnesium > z.
Seems to bind to collagen type IV and laminin.
                                                                                           SUBCELLULAR LOCATION: Type I membrane protein (isoforms 1 and 2) Secreted (isoform 3). Isoform 1 is expressed at the cell surface while isoform 2 is predominantly expressed within the endoplasmin
                                                                         reticulum and not at the plasma membrane.

FUNCTION: Integrin alpha-D/beta-2 is a receptor for ICAM3 and VCAM1. May play a role in the atherosclerotic process such as clearing lipoproteins from plaques and in phagocytosis of bloodborne pathogens, particulate matter, and senescent erythrocytes from the blood (By similarity).

SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-D associates with beta-2 (By similarity).

SUBCELIULAR LOCATION: Type I membrane protein (By similarity).

DOMAIN: The integrin I-domain dinsert) is a VWFA domain. Integrin with I-domains do not undergo protease cleavage.

SIMILARITY: Belongs to the integrin alpha chain family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61

7. Immunol. 163:1984-1990(1999).

-i- FUNCTION: Integrin alpha-D/beta-2 is a receptor for ICAM3 and

VCAM1. May play a role in the atherosclerotic process such as

clearing lipoproteins from plaques and in phagocytosis of blood-
borne pathogens, particulate matter, and senescent erythrocytes
                                                                                                                                                                                                                                                                                                                                MEDLINE=99370002; PubMed=10438935;

DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrine with I-domains do not undergo protease cleavage. SIMILARITY: Belongs to the integrin alpha chain family. SIMILARITY: Contains 7 G-GAP repeats. SIMILARITY: Contains 1 VWFA domain.
